## Introduction

Every year, millions of Africans struggle to raise urgent funds for medical emergencies, education, and community needs. Yet, there's no trusted, active donations platform built for Africa. Most families are left relying on informal methods – WhatsApp groups, Twitter appeals, or direct bank transfers, approaches that are slow, untransparent, and often exploited by fraud. This gap has created a pressing need for a platform that delivers trust, transparency, and global accessibility.

Zyra is that solution: a donations facilitation platform built for Africa, empowering beneficiaries to raise support transparently while enabling donors from anywhere in the world to give in fiat or crypto with confidence.

### Disclaimer :

Zyra is not a cryptocurrency exchange, investment platform, or remittance service. It is a donations facilitation platform, designed solely to connect donors and beneficiaries through blockchain technology and secure payment systems, with transparency, accountability, and trust at its core

### The Problem :

- Many donation platforms lack transparency, making it hard to trust where funds go.
- Fraudulent campaigns discourage genuine donors.
- Traditional fundraising systems are slow, expensive, and not inclusive of global supporters.
- Millions of Africans in need remain underserved due to limited access to trusted donation channels.

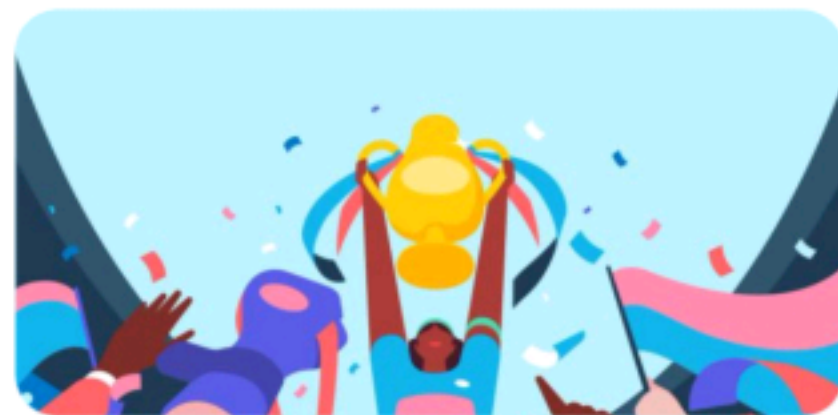

## The Solution:

Zyra bridges the gap between traditional donations and Web3 by offering:

- **Verified Campaigns:** Authenticity ensured via digital and offline checks.
- **Transparency Dashboard:** On-chain proof of donations for blockchain contributions.
- **Cross-border Access:** Accepts crypto, stablecoins, and in the future, fiat via local payment gateways (e.g., Naira).
- **Community Trust Layer:** Local institutions (churches, mosques, NGOs) support verification.
- **Inclusive Onboarding:** Simple setup for Web2 donors who prefer card or bank transfers, alongside Web3 donors using crypto wallets.

MVP (CURRENT BUILD)

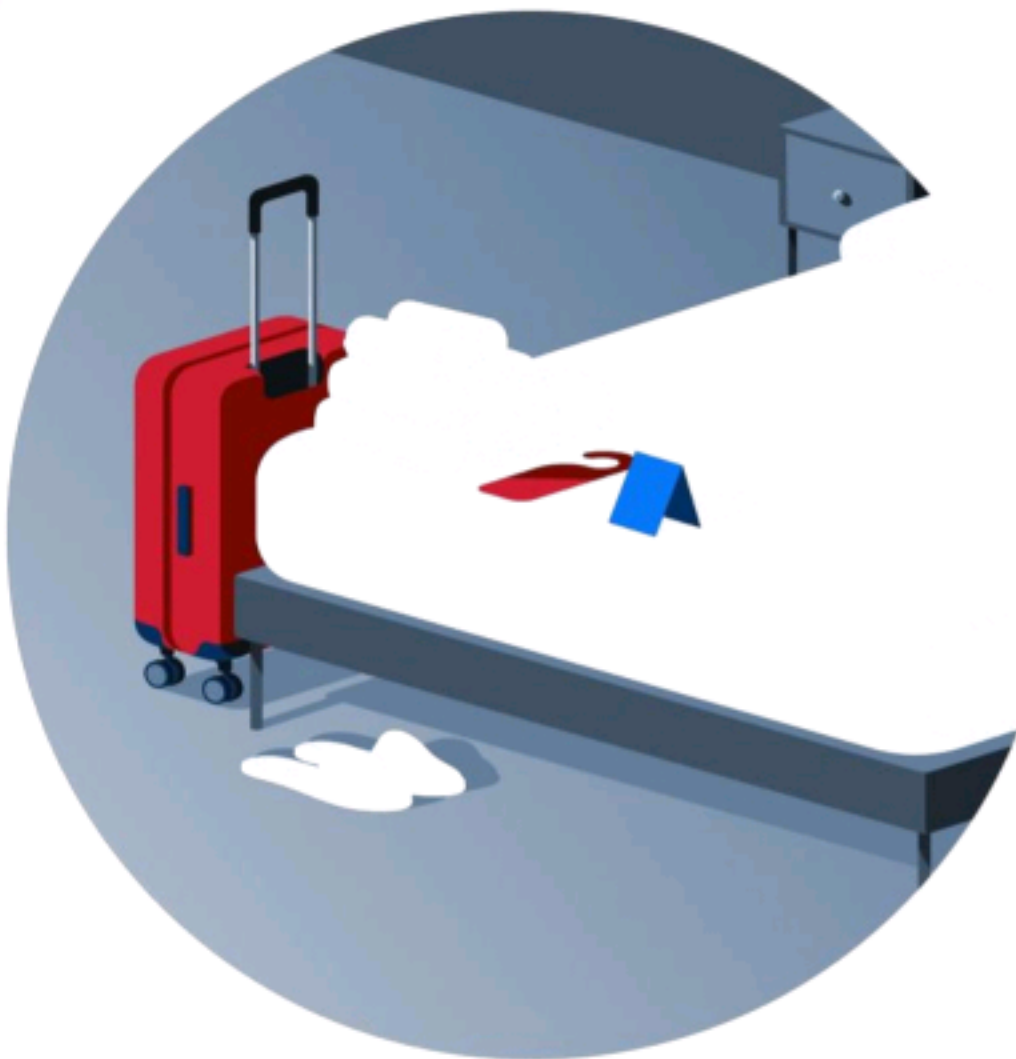

- **User Profiles:** Beneficiaries and donors can create simple accounts.
- **Campaign Creation:** Quick setup with title, description, and target goal.
- **Donations:** Accept contributions via supported wallets (crypto & stablecoins).
- **Transparency Dashboard:** Campaign pages display total contributions with on-chain proof.
- **Beneficiary Verification:** Basic checks to ensure authenticity before approval.
- **Cross-Border Donations:** Supporters worldwide can contribute easily.

### Future Additions (Expanded)

- 1. Donor wallet/dashboard for tracking contributions.
- 2. Fiat payment gateway integration (Naira and beyond).
- 3. Native token for governance and rewards.
- 4. Offline help desks for physical verification.
